Introduction

Congratulations on your purchase of a Champion Power Equipment inverter generator. CPE designs and builds generators to strict specifications. With proper use and maintenance, this generator will bring years of satisfying service.

This Owner's Manual contains important safety instructions and information. SAVE THESE INSTRUCTIONS FOR FUTURE REFERENCE.

Portable Power Generator

This unit is a gasoline engine driven, alternating current (AC) generator. It is designed to supply electrical power for lighting, appliances, tools and similar equipment.

Accessories

Champion Power Equipment manufactures and sells accessories designed to help you get the most from your purchase. To find out more about our covers, power cables and storm kits, please visit our web site at

Manual Conventions

Manual Conventions

This manual uses the following symbols to help differentiate between different kinds of information. The safety symbol is used with a key word to alert you to potential hazards in operating and owning power equipment.

Follow all safety messages to avoid or reduce the risk of serious injury or death.

DANGER

DANGER indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

WARNING

WARNING indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION

CAUTION indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

CAUTION

CAUTION used without the safety alert symbol indicates a potentially hazardous situation which, if not avoided, may result in property damage.

NOTE

If you have questions regarding your generator, we can help. Please call our help line at 1-877-338-0999.

Safety Rules

WARNING

Read this manual thoroughly before operating your generator. Failure to follow instructions could result in serious injury or death.

WARNING

The engine exhaust from this product contains chemicals known to the state of California to cause cancer, birth defects, or other reproductive

DANGER

Generator exhaust contains carbon monoxide, a colorless, odorless, poison gas. Breathing carbon monoxide will cause nausea, dizziness, fainting or death. If you start to feel dizzy or weak, get to fresh air immediately.

Operate generator outdoors only in a well ventilated area DO NOT operate the generator inside any

building, including garages, basements, crawlspaces and sheds, enclosure or compartment, including the generator compartment of a recreational vehicle. DO NOT allow exhaust fumes to enter a confined area through windows, doors, vents or other

openings. DANGER CARBON MONOXIDE, using a generator indoors CAN KILL YOU IN

MINUTES.

DANGER

Rotating parts can entangle hands, feet, hair, clothing and/or accessories.

Traumatic amputation or severe laceration can result.

Keep hands and feet away from rotating parts. Tie up long hair and remove jewelry. Operate equipment with guards in place. DO NOT wear loose-fitting clothing, dangling drawstrings or items that could become caught.

DANGER

Generator produces powerful voltage.

DO NOT touch bare wires or receptacles. DO NOT use electrical cords that are worn, damaged or frayed.

DO NOT operate generator in wet weather. DO NOT allow children or unqualified persons to operate or service the generator Use a ground fault circuit interrupter (GFCI) in

damp areas and areas containing conductive material such as metal decking.

Use approved transfer equipment to isolate generator from your electric utility and Notify your utility company before connecting your generator to your power system.

WARNING

Sparks can result in fire or electrical shock.

When servicing the generator:

Disconnect the spark plug wire and place it where it cannot contact the plug. DO NOT check for spark with the plug removed. Use only approved spark plug testers.

WARNING

Running engines produce heat. Severe burns can occur on contact. Combustible material can catch fire on contact.

DO NOT touch hot surfaces. Avoid contact with hot exhaust gases. Allow equipment to cool before touching. Maintain at least three feet of clearance on all sides to ensure adequate cooling. Maintain at least five feet of clearance from combustible materials.

DANGER

Fuel and fuel vapors are highly flammable and extremely explosive.

Fire or explosion can cause severe burns or death.

Unintentional startup can result in entanglement, traumatic amputation or laceration.

When adding or removing fuel

Turn the generator off and let it cool for at least two minutes before removing the fuel cap. Loosen the cap slowly to relieve pressure in the tank.

Only fill or drain fuel outdoors in a well-ventilated area.

DO NOT overfill the fuel tank.

Always keep fuel away from sparks, open flames, pilot lights, heat and other sources of ignition. DO NOT light or smoke cigarettes.

When starting the generator

DO NOT attempt to start a damaged generator. Make certain that the gas cap, air filter, spark plug, fuel lines and exhaust system are properly in place.

Allow spilled fuel to evaporate fully before attempting to start the engine.

Make certain that the generator is resting firmly on level ground.

When operating the generator:

DO NOT move or tip the generator during

DO NOT tip the generator or allow fuel or oil to

When transporting or servicing the generator:

Make certain that the fuel shutoff valve is in the off position and the fuel tank is empty. Disconnect the spark plug wire.

When storing the generator:

4

Store away from sparks, open flames, pilot lights, heat and other sources of ignition.

WARNING

Rapid retraction of the starter cord will pull hand and arm towards the engine faster than you can let go.

Unintentional startup can result in entanglement, traumatic amputation or laceration.

Broken bones, fractures, bruises or sprains could

When starting engine, pull the starter cord slowly until resistance is felt and then pull rapidly to avoid kickback.

DO NOT start or stop the engine with electrical devices plugged in.

CAUTION

Exceeding the generator's running capacity can damage the generator and/or electrical devices connected to it

DO NOT overload the generator.

Start the generator and allow the engine to stabilize before connecting electrical loads. Connect electrical equipment in the off position, and then turn them on for operation.

Turn electrical equipment off and disconnect before stopping the generator.

DO NOT tamper with the governed speed.

DO NOT modify the generator in any way.

CAUTION

Improper treatment or use of the generator can damage it, shorten its life and void your warranty.

Use the generator only for intended uses. Operate only on level surfaces.

DO NOT expose generator to excessive moisture, dust, or dirt.

DO NOT allow any material to block the cooling

If connected devices overheat, turn them off and disconnect them from the generator.

DO NOT use the generator if:

Electrical output is lost

Equipment sparks, smokes or emits flames

Equipment vibrates excessively

Controls and Features

Read this owner's manual before operating your generator. Familiarize yourself with the location and function of the controls and features. Save this manual for future reference.

Generator

- (1) Carrying Handle
- **(2) Fuel Lever Vent** Turn this valve to the "On" position to supply air to the tank.
- (3) Fuel Cap Remove to add fuel
- (4) Spark plug access cap
- (5) Muffler

- **(6) Maintenance Cover** Oil filler, Air filter, Carburetor access
- **(7) Recoil Starter** Used to start the engine

Power Panel

- (1) Oil Warning Light Check oil level when this light turns on. Engine will not run when indicator is lit.
- **(2) Overload Indicator Light** This light turns ON when the generator is overloaded and will cut power to the receptacles.
- **(3) Output Light** Remains ON during normal operating conditions. Shuts OFF when generator is overloaded.
- (4) Economy Control Switch
- (5) Engine Switch
- (6) Fuel Valve Knob

- **(7) 120 V Duplex** Use this duplex to operate 120 Volt AC, single phase, 60 Hz loads requiring up to 13.3 A Or 1600 Watts of power.
- **(8) Ground Terminal** Consult an electrician for local grounding regulations.
- (9) Circuit Breaker
- (10) Parallel Operation Outlets *
- (11) Parallel Operation Control
- (12) Choke Knob
- * These outlets are used for connecting two Champion model 73552i generators for parallel operation (see page 12). A Champion model 73500i cable kit (optional equipment) is required for parallel operation.

Parts Included

Your 73552i Gasoline Powered Inverter Generator ships with the following parts:

Oil Funnel Spark Plug Socket

Assembly

Assembly

This unit ships from our factory without oil. It must be properly serviced with fuel and oil before operation.

If you have any questions regarding the assembly of your generator, call our help line at 1-877-338-0999. Please have your serial number and model number available.

Remove the Generator from the Shipping Carton

- 1. Set the shipping carton on a solid, flat surface.
- Remove everything from the carton 2. except the generator.
- 3. Using the handle of the unit, carefully remove the generator from the box.

Add Engine Oil

CAUTION

DO NOT attempt to crank or start the engine before it has been properly filled with the recommended type and amount of oil. Damage to the generator as a result of failure to follow these instructions will void your warranty.

- Place the generator on a flat, level surface.
- Loosen the cover screw and remove the maintenance cover.

3. Remove oil fill cap/dipstick to add oil.

- Add 0.42 qt (0.4 L) of oil and replace oil fill cap/dipstick. See "Specifications" page in the manual for oil recommendations based on operating conditions.
- 5. Check engine oil level daily and add as needed.

CAUTION

The engine is equipped with a low-oil-shutoff and will stop when the oil level in the crankcase falls below the threshold level.

😲 NOTE

Check oil often. Refer to the Maintenance section for recommended service intervals.

Add Fuel

- Use clean, fresh, regular unleaded fuel with a minimum octane rating of 85.
- DO NOT mix oil with fuel.
- 3. Clean the area around the fuel cap.
- 4. Remove the fuel cap
- 5. Slowly add fuel to the tank. DO NOT overfill. Fill to the red level, visible on the fuel filter.
- 6. Screw on the fuel cap and wipe away any spilled fuel.

CAUTION

Use regular unleaded gasoline with a minimum octane rating of 85.

Do not mix oil and gasoline.

Fill the tank to the red level, visible on the fuel

DO NOT fill fuel tank indoors.

DO NOT fill fuel tank when the engine is running or hot.

DO NOT overfill the fuel tank.

DO NOT light cigarettes or smoke when filling the fuel tank.

Grounding

Your generator must be properly connected to an appropriate ground to help prevent electric shock.

WARNING

Failure to properly ground the generator can result in electric shock.

A ground terminal connected to the frame of the generator has been provided on the power panel. For remote grounding, connect a length of heavy gauge (12 AWG minimum) copper wire between the generator ground terminal and a copper rod driven into the ground. We strongly recommend that you consult with a qualified electrician to ensure compliance with local electrical codes.

Operation

Generator Location

Please consult your local authority. In some areas, generators must be registered with the local utility.

Generators used at construction sites may be subject to additional rules and regulations. This generator must have at least five feet of clearance from combustible material. Leave at least three feet of clearance on all sides of the generator to allow for adequate cooling, maintenance and servicing.

Place the generator in a well-ventilated area. DO NOT place the generator near vents or intakes where exhaust fumes could be drawn into occupied or confined spaces. Carefully consider wind and air currents when positioning generator.

Starting the Engine

- Make certain the generator is on a flat, level surface.
- 2. Disconnect all electrical loads from the generator. Never start or stop the generator with electrical devices plugged in or turned on.
- 3. Turn the fuel cap vent lever to the "On" position.

4. Turn the fuel valve to the "On" position.

5. Turn the engine switch to the "On" position.

6. Pull the choke lever out when starting the generator.

7. Pull the starter cord slowly until resistance is felt and then pull rapidly

As engine warms up, push the choke lever in.

If the engine starts but does not run, make certain that the generator is on a flat, level surface. The engine is equipped with a low oil sensor that will prevent the engine from running when the oil level falls below a critical threshold.

Economy Control Switch

The Economy Control switch can be activated in order to minimize fuel consumption and noise while operating the unit during times of reduced electrical output, allowing the engine speed to idle during periods of non-use. The engine speed returns to normal when an electrical load is connected. When the economy switch is off, the engine runs at normal speed.

WARNING

For periods of high electrical load or momentary fluctuations, the Economy Control Switch should be turned OFF.

Connecting Electrical Loads

- Let the engine stabilize and warm up for a few minutes after starting
- Plug in and turn on the desired 120 Volt AC single phase, 60 Hz electrical loads.

DO NOT connect 3-phase loads to the generator.

DO NOT connect 50 Hz loads to the generator.

DO NOT overload the generator.

Stopping the Engine

- Turn off and unplug all electrical loads. Never start or stop the generator with electrical devices plugged in or turned
- 2. Let the generator run at no-load for several minutes to stabilize internal temperatures of the engine and generator.
- Turn the engine switch/fuel valve to the "Off" position.
- 4. Turn the fuel cap lever vent to the "Off" position.

Do Not Overload Generator

Capacity

Follow these simple steps to calculate the running and starting watts necessary for your purposes.

- Select the electrical devices you plan on running at the same time.
- Total the running watts of these items. This is the amount of power you need to keep your items running.
- Identify the highest starting wattage of all devices identified in step 1. Add this number to the number calculated in step 2. Starting wattage is the extra burst of power needed to start some electric driven equipment. Following the steps listed under "Power Management" will guarantee that only one device will be starting at a time.

Power Management

Use the following formula to convert voltage and amperage to watts:

Volts x Amps = Watts

To prolong the life of your generator and attached devices, follow these steps to add electrical load:

- Start the generator with no electrical load attached.
- 2. Allow the engine to run for several minutes to stabilize.
- Plug in and turn on the first item. It is best to attach the item with the largest load first.
- 4. Allow the engine to stabilize.
- Plug in and turn on the next item.
- Allow the engine to stabilize.
- Repeat steps 5-6 for each additional item

Overload Operation

The overload indicator light will turn on when the load exceeds 1750W. If the load exceeds 1900W, the light will blink and cut power to the receptacles. To recover the power, you must shut off the engine, wait 5 seconds, and restart the generator.

Parallel Operation

Two Champion model 73552i generators can be operated in parallel to increase the total available electrical power to 3000 watts. A Champion model 73500i parallel kit (optional equipment) is required for parallel operation. For kit availability, call Customer Service at 1-877-338-0999 or visit www.championpowerequipment.com.

Detailed instructions for parallel kit installation and operation of the connected generators are provided in the parallel kit Owner's Manual and Operating Instructions. Please note the following important requirements:

- The two generators may be stacked one on top of the other by aligning the lower pads and upper pockets at each corner of the generators.
- 2. Disconnect or turn off all electrical loads from both generators.
- 3. The ECON switch must be in the same position on both generators.
- 4. Before starting the engines, connect the AC power outlet cables, the control cables and the ground cables to both generators. Follow the instructions supplied with the parallel kit.
- 5. Do not disconnect any cables after the engines have been started.
- 6. Start both engines and observe the green output indicator light on both generator panels.
- 7. Connect and turn on the electrical devices.
- 8. The total electrical load must not exceed 3000 watts.
- 9. Follow the instructions on the previous page for turning off the generators.

NOTE

Never exceed the generator capacity when adding loads.

Wattage Reference Chart

Use the chart to determine approximate wattage requirements for your equipment.

Starting watts can exceed three times the running watts. The values in the following table are approximate. Refer to your tool or appliance for actual wattage consumption.

Maintenance

The owner/operator is responsible for all periodic maintenance.

WARNING

Never operate a damaged or defective generator.

WARNING

Tampering with the factory set throttle control will void your warranty.

WARNING

Improper maintenance will void your warranty.

Complete all scheduled maintenance in a timely manner. Correct any issue before operating the generator.

For service or parts assistance, contact our help line at 1-877-338-0999.

Engine Maintenance

To prevent accidental starting, remove and ground spark plug wire before performing any service.

Oil

Change oil when the engine is warm. Refer to the oil specification to select the proper grade of oil for your operating environment.

- Loosen the cover screw and remove the maintenance cover.
- 2. Remove the oil filler cap.
- Tilt the generator on its side and allow the oil to drain completely.

- 4. Add 0.42 qt (0.4 L) of oil and replace oil fill cap/dipstick.
- Reinstall the maintenance cover and tighten the cover screw.
- Dispose of used oil at an approved waste management facility.

Spark Plugs

- Remove the maintenance cover.
- Remove the spark plug cable from the spark plug.
- Use the spark plug tool that shipped with your generator to remove the plug. Remove the spark plug access cap and insert the spark plug tool through this hole.
- Remove the spark plug.
- Inspect the electrode on the plug. It must be clean and not worn to produce the spark required for ignition.

6. Make certain the spark plug gap is 0.6 -0.7 mm (0.024 - 0.028 in.).

- Refer to the spark plug recommendation chart when replacing the plug.
- Carefully thread the plug into the engine.
- 9. Use the spark plug tool to firmly install the plug.
- 10. Attach the spark plug wire to the plug.
- 11. Reinstall the spark plug access cap, and maintenance cover.

Maintenance

Air Filter

- Remove the maintenance cover.
- Locate the air filter plastic cover. Remove the screw using a Phillips head screwdriver.
- 3. Remove the foam element.
- 4. Wash in liquid detergent and water. Squeeze thoroughly dry in a clean cloth.
- 5. Saturate in clean engine oil.
- 6. Squeeze in a clean, absorbent cloth to remove all excess oil.
- Place the filter in the assembly. 7.
- 8. Reattach the air filter cover.
- 9. Reinstall the maintenance cover and tighten the cover screw securely.

Cleaning

CAUTION

DO NOT spray water into the generator case

Water can contaminate the fuel system.

Use a damp cloth to clean exterior surfaces of the generator.

Use a soft bristle brush to remove dirt and

Use an air compressor (25 PSI) to clear dirt and debris from the generator.

Spark Arrester Cleaning

- 1. Loosen M6x22 bolts to remove two pillars.
- 2. Remove 4 screws to remove the muffler cover assembly.
- Loosen the spark arrester clamp, and remove the spark arrester.
- 4. Carefully remove the carbon deposits from the spark arrester screen with a wire brush.

- Replace the spark arrester if it is damaged.
- Reattach spark arrester, cover assembly, and pillars.

Adjustments

The air-fuel mixture is not adjustable. Tampering with the throttle control can damage your generator and your electrical devices and will void your warranty. CPE recommends that you contact our service line at 1-877-338-0999 for all other service and/or adjustment needs.

Maintenance Schedule

Follow the service intervals indicated in the following schedule.

Service your generator more frequently when operating in adverse conditions. Contact our help line at 1-877-338-0999 to locate the nearest Champion Power Equipment certified service dealer for your generator or engine maintenance needs.

Every 8 hours or daily
Check oil level
Clean around air intake and muffler
First 10 Hours
Change oil
Every 50 hours or every season
Clean air filter
Change oil if operating under heavy load or in hot environments
Every 100 hours or every season
Change oil
Clean/Adjust spark plug
Check/Adjust valve clearance *
Clean spark arrester
Clean fuel tank and filter *
Every 3 years
Replace fuel line

 To be performed by knowledgeable, experienced owners or Champion Power Equipment certified service dealers

Generator Maintenance

Make certain that the generator is kept clean and stored properly. Only operate the unit on a flat, level surface in a clean, dry operating environment. DO NOT expose the unit to extreme conditions, excessive dust, dirt, moisture or corrosive vapors.

Storage

Storage

The generator should be started at least once every 14 days and allowed to run for at least 20 minutes. For longer term storage, please follow these guidelines.

- 1. Allow the engine to cool completely before storage.
- 2. Clean the generator according to the instructions in the Maintenance section.
- 3. Remove the maintenance cover. Drain all fuel completely from the fuel line and carburetor to prevent varnish build up.
- 4. Turn the engine switch/fuel valve ON, loosen the carburetor drain screw, and drain the gasoline into a suitable container.
- 5. Remove the spark plug cap, then pull the recoil grip 3 times to drain the gasoline from the fuel pump.
- 6. Change the engine oil.
- 7. Remove the spark plug and pour about a tablespoon of oil into the cylinder. Crank the engine slowly to distribute the oil and lubricate the cylinder.
- 8. Reattach the spark plug.

Warranty

CHAMPION POWER EQUIPMENT 2 YEAR LIMITED WARRANTY

Effective September 1, 2006. Replaces all undated warranties and all warranties dated before September 1, 2006.

Warranty Qualifications

Champion Power Equipment (CPE) will register this warranty upon receipt of your Warranty Registration Card and a copy of your sales receipt from one of CPE's retail locations as proof of purchase.

Please submit your warranty registration and your proof of purchase within ten (10) days of the date of purchase.

Repair/Replacement Warranty

CPE warrants to the original purchaser that the mechanical and electrical components will be free of defects in material and workmanship for a period of (2) years from the original date of purchase (90 days for commercial & industrial use). Transportation charges on product submitted for repair or replacement under this warranty are the sole responsibility of the purchaser. This warranty only applies to the original purchaser and is not transferable.

Do not return the unit to the place of purchase

Contact CPE's Technical Service and CPE will troubleshoot any issue via phone or e-mail. If the problem is not corrected by this method, CPE will, at its option, authorize evaluation, repair or replacement of the defective part or component at a CPE Service Center. CPE will provide you with a case number for warranty service. Please keep it for future reference. Repairs or replacements without prior authorization, or at an unauthorized repair facility, will not be covered by this warranty.

Warranty Exclusions

This warranty does not cover the following repairs and equipment:

Normal Wear

Generators need periodic parts and service to perform well. This warranty does not cover repair when normal use has exhausted the life of a part or the equipment as a whole.

Installation, Use and Maintenance

This warranty will not apply to parts and/or labor if this generator is deemed to have been misused, neglected, involved in an accident, abused, loaded beyond the generator's limits, modified, installed improperly or connected incorrectly to any electrical component. Normal maintenance such

as spark plugs, air filters, adjustments, fuel system cleaning and obstruction due to buildup is not covered by this warranty.

Other Exclusions

This warranty excludes:

Cosmetic defects such as paint, decals, etc. Wear items such as filter elements, o-rings, etc. Accessory parts such as starting batteries, and storage covers.

Failures to due acts of God and other force majeure events beyond the manufacturer's control.

Problems cause by parts that are not original Champion Power Equipment parts. This warranty does not apply to generators used for prime power in place of a utility.

Limits of Implied Warranty and Consequential Damage

Champion Power Equipment disclaims any obligation to cover any loss of time, use of this product, freight, or any incidental or consequential claim by anyone from using this generator. THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE

A unit provided as an exchange will be subject to the warranty of the original unit. The length of the warranty governing the exchanged unit will remain calculated by reference to the purchase date of the original unit.

This warranty gives you certain legal rights which may change from state to state. Your state may also have other rights you may be entitled to that are not listed within this warranty.
